

## Process Excellence

*“Perfection has to do with the end product, but excellence has to do with the process”*

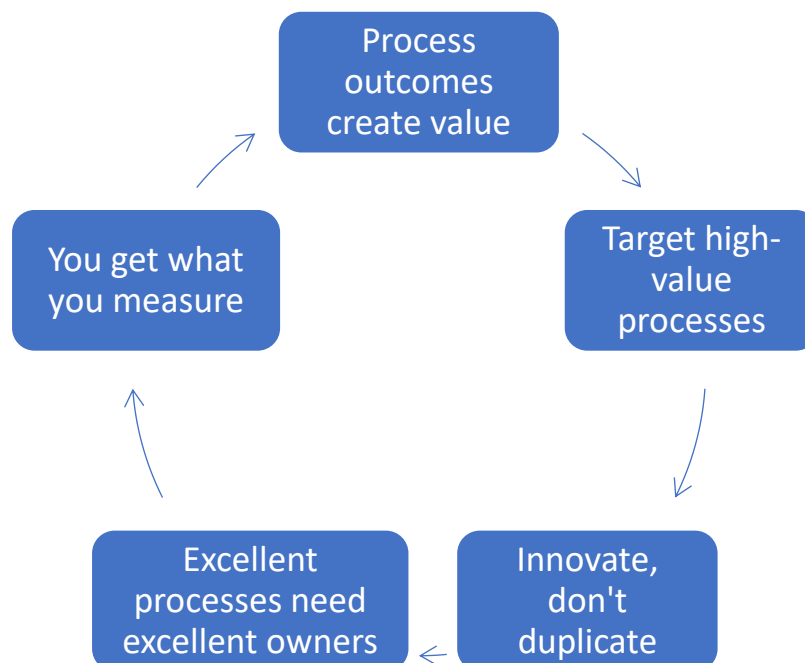

Business and manufacturing executives are looking for new ways to improve their operations so that their company's products/services and bottom line can improve. Simultaneously, it is critical to maximize the value of their limited human resources and capital to ensure that their operations run well on a constant basis.

In the emerging situation, leading firms are building organizational capabilities that support process excellence objectives. One thing to keep in mind is that as manufacturing businesses evolve, the availability of competent talent and the ability to efficiently collect and share knowledge become crucial success factors.

A process is a series of activities, often repeated over and over with the basic flow of transforming inputs into outputs. The activities that make up the process are not the same. Some activities add value to a process and other activities fail to add value. Therefore, one way to think “process improvement” is to think in terms of reducing non-value-added activities.

Process Excellence is about far more than increasing efficiency. It is about delivering exceptional value, setting a new standard for best practices and even redefining the competitive landscape in an industry.

Principles of Process Excellence:

We, at 'Man2succeed Center for Business Excellence' help the organizations build process excellence by capturing knowledge, transferring information, supporting teams, partnering and collaborating with them.

One such training is Process Excellence Manager, which combines the process excellence tools of process monitoring, theory of constraints. A qualified PEX Manager can quickly develop into a process excellence expert and lead the company to greater profitability.

the Process Excellence Manager combines the process respect for people, Lean, Six Sigma, and TOC. A qualified PEX Manager can quickly develop into a process excellence expert and lead the company to greater profitability.

Video lectures, presentations, assignments, exercises, and exams make up the program. After passing a final knowledge test, the participant will receive a professional endorsement as a qualified Process Excellence Manager.

If the PEM takes up a project and tries to improve the process for gaining profit, improving quality, reducing cost of product, enhance productivity of people and process, PEM is expected to follow certain path. The course depicts the process improvement path to achieve process excellence.

PEM is expected to trace through the process and check at every level of improvement and proceed ahead with the project.
